**Abstract:** Education and training in the context of sustainable development are key factors in the economic and human progress of any society and can achieve this role and its functions only if they are connected to the needs of society and individuals and are integrated into a comprehensive development strategy. The conditions to remain in the labor market of the future are related to creativity, adaptability and the permanent completing of skills and abilities in line with changes in the content of work. The paper focuses on the development of human capital creativity in the context of sustainable development within an online network for the transfer of creative technologies and innovative business in the Central Region firms / organizations. The online network currently applies creative holistic methods and practises rapid learning by learning by doing from the perspective of innovation, of permanent education, of the role of scientific and other types of knowledge, having a scientific base for the management of transition towards a European society based on knowledge.
