**Abstract:** The labor market is the next crucial stage for which today's students are preparing. Employers are now in a difficult situation to want to make hiring, necessary to maintain their activity, and not to find suitable candidates. In the context of recent legislative changes, the employees' perspective is a pessimistic one, expecting more work and less money. Employers and employees are looking for the balance solution to survive. Solutions could come through a continuous communication and relationship between the academic environment and the industrial environment. This is the context in which the present study wants to define the profile of a potential employee belonging to one of the industries where massive investments have been made and massive employment is needed: the automotive industry.

**Keywords:** automotive industry, engineering students, job expectation
