**Abstract:** The industrial revolution and the constant development of technology have created a new model of individual reporting to society, producing major changes in both collective consciousness and the development of interpersonal relationships. Most importantly, the industrial evolution has had and has a major impact on the economic development of the countries. The IT & C industry has become over time a safe and efficient "tool" that generates growth, not just by developing millions of jobs, but also by promoting innovation and global progress. In this context, the economic competitiveness of countries will depend largely on their capacity or inability to adapt to the information society, but also on the use of new technologies to their advantage. The domain of IT has captured the levels of society, and this paper aims to provide an overview of its evolution in Romania. This article reveals the current situation about the IT field in a specific country, Romania, and to outline the guidelines resulted after an analysis was made.

**Keywords:** IT services, IT companies, IT&C industry, software industry
