

EVOLUȚIA NORMELOR DE TIMP ÎN FIRMELE DE CONSTRUCȚII DIN ROMÂNIA

THE EVOLUTION OF TIME NORM IN CONSTRUCTION COMPANIES IN ROMANIA

Drd. Vasile Florin VRAJA
Universitatea Tehnică din Cluj-Napoca

Abstract: Technology implementation in execution means evolution, precision, high quality and shorter time for project delivery, unfortunately for the constructions in Romania, the implementation of technology was not legally achieved even on paper because for most technologies we do not have updated workload in time or workers able to operate these machines to achieve the efficiency indicated by the manufacturers. A first step to demonstrate the importance of technology in construction execution would be updating the workloads in time and highlighting the benefits brought about by technology. The article shows that technology is not considered in all the works, and workloads in time are not a topical subject.

Keywords: evolution, technology in work, regress, investment.
