Abstract: This study presents and examines the conditions and the methods of drafting and elaborating the orientation sketch of a traffic accident location, both from the perspective of the investigation and prosecution bodies, and from the perspective of the specialists and experts in the matter of road transport who analyze and investigate traffic accidents from a technical point of view. Whatever the modalities of graphical representation of a traffic accident site, the sketch of the scene helps to more accurately and more closely understand the real picture of the place where the accident occurred, with the purpose of clearly illustrating the findings mentioned in the investigation report drawn on site and at the same time to complete the other means of fixing the results of the on-site investigation.

Keywords: Orientation sketch, traffic accident, vehicle, public road, place of occurrence, offence
