Abstract: Starting from the main objectives of road safety established at European and national levels, the purpose of this study is to thoroughly analyse and emphasize the failure to give-way corroborated with the lack of attention while driving as main causes of road accidents, from the point of view of the statistics and of the space, as well as from what the dynamic and the evolution of this type of events actually mean. Furthermore, based on and complying with the findings resulted from the analysis carried out, we would like to present a set of proposals and punctual measures adapted to the main factors contributing to road safety and security meant to lead to the reduction of the number of road accidents generated by this cause and, implicitly, to the diminution of the degree of victimisation.

Keywords: vehicle priority, road accident, vehicle, public road, triggering cause
