Abstract: This paper presents a few aspects regarding risks and opportunities analysis in an integrated management system, focusing in detail on health and safety at work and also on aspects regarding quality, environment and information security. The main objective was to identify and present aspects that may be taken into consideration when evaluating risks in an integrated management system that asks for constant improvement according to ISO standards' requirements. This paper may be a useful support for an integrated management system responsible who, at this point, has to answer to all the challenges brought by changes in the new version of standards.

Keywords: integrated management systems, standards, risk management.
