Abstract: This article deals with the problems of youth professional career in transforming Russian society. We analyze the most important problems of professional career: job placement after graduating from the university problem, a motivation and satisfaction with a work problem, promotion problems. We examine the main tendencies in professional self-identification of the 20th century late 90th and in the beginning of 21st century. We reveal the basic strategies of youth career development under actual social and economical conditions.

Keywords: graduates, professional career, job placement, motivation.
